The document is not in a state to be submitted to a Workgroup letter ballot. The document actually does not exist till the closing date of the ballot. The request for each WG member to transform the baseline document into the target one is not acceptable in my opinion. The contributions needed for that transform are not complete and contradictory. (e.g. see IEEE C802.16g-06/012r2. The same document number can be found in the files C80216g-06_012r2.pdf and in C80216g-06_011r2.pdf. Drawings are missing and more).

Suggested Remedy

Produce IEEE 802.16g-06/002 and submit it for ballot.

Proposed Resolution**Recommendation:****Recommendation by****Reason for Recommendation****Resolution of Group****Decision of Group:**

Response by the Working Group Chair:

In several cases, figures in the posted PDF version of the contribution were indeed faulty, though the original DOC version reviewed during Session #41 was correct. Corrected PDFs have been posted <<http://ieee802.org/16/netman/16g.html#contrib>>, with the notation "Corrected PDF posted 2006-01-30."
