Reply-To: Michael Lynch <mjlynch@NORTEL.COM>

Dear EC,

IEEE 802 has received three liaison statements from ITU-R WP5A. The first is a request for inputs for Recommendation ITU-R M.1801 dealing with radio interface standards for broadband wireless access (BWA) systems, including mobile and nomadic applications, in the mobile service operating below 6 GHz. The second invites a review of preliminary BWA characteristics for use in compatibility studies with fixed satellite service (FSS) systems in the 3400 - 3600 MHz band. The third is an invitation for contributions on a proposed draft new report dealing with radio interface standards that could be used for public protection and disaster relief (PPDR) in the 746 - 806 MHz band in Region 2 (the Americas) and some countries in Region 3 (Asia pacific).

Since the attachments would have exceeded the permitted size of this reflector I have posted them to the 802.18 Mentor web site as Docs. [93](#), [94](#) and [95](#).

Any response needs to be submitted to ITU-R by 11 May. These liaison statements may be considered at the January interim meeting and March plenary meetings. The due date in Geneva coincides with the start of the May wireless interim so it seems best to complete any responses by the end of the March plenary..

Regards,

Mike
